

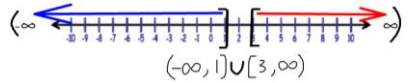

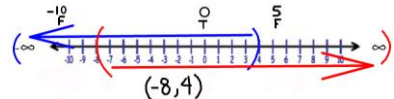

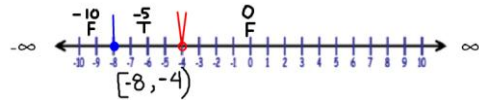

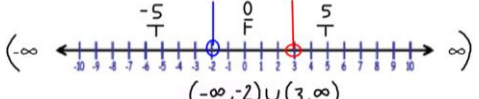

## Graphing Compound Inequalities (including Absolute Value, Rational and Quadratic)

Type	Key Points	Example
Compound, including AND/OR	<ul style="list-style-type: none"> <li>• General rules, and</li> <li>• If 3 part, keep <math>x</math> in center; if it stays <math>&lt;</math> or <math>\leq</math>, graph as AND</li> <li>• Graph using AND/OR rules</li> </ul>	$3x+2 \leq 5$ or $5x-7 \geq 8$ $3x \leq 3$ $5x \geq 15$ $x \leq 1$ $x \geq 3$  <p style="text-align: center;"><math>(-\infty, 1] \cup [3, \infty)</math></p>
Inequalities with Absolute Values	<ul style="list-style-type: none"> <li>• First, isolate the absolute value</li> <li>• Second, separate into 2 equations <ul style="list-style-type: none"> <li>○ 1) original w/o absolute value</li> <li>○ 2) multiply right side by negative &amp; reverse inequality</li> </ul> </li> <li>• Solve, using algebra and general rules</li> <li>• Graph using AND/OR rules or graph by using test points</li> <li>• <b>NOTE:</b> Once isolated, absolute value cannot equal a negative or be less than zero so answer is “no solution;” however, if set to <math>&gt;</math> or <math>\geq</math> a negative, “all real numbers.”</li> </ul>	$ x+2 +9 < 15$ $ x+2  < 6$ $x+2 < 6$ $x+2 > -6$ $x < 4$ (and) $x > -8$  <p style="text-align: center;"><math>(-8, 4)</math></p>
Rational Inequalities (fractions)	<ul style="list-style-type: none"> <li>• Set right side to 0</li> <li>• Use LCD on the left side to create a single fraction</li> <li>• Set each – numerator and denominator – to <b>equal</b> 0 and solve separately, using general rules</li> <li>• Use solutions to establish test points, use open/closed circles (with verticals, if you want), not ( ) [ ]</li> <li>• Denominator <b>cannot include</b> point that makes it = 0, alter the inequality to exclude it</li> <li>• Graph using test points</li> </ul>	$\frac{x}{x+4} \geq 2$ ( $x \neq -4$ ) $-(x+8) = 0$ $x+4 = 0$ $x+8 = 0$ $x = -4$ $x = -8$ ●      ** $x \neq -4$ , so use ●  $\frac{x}{x+4} - 2 \geq 0$ $\frac{x}{x+4} - \frac{2(x+4)}{x+4} \geq 0$ $\frac{x-2x-8}{x+4} \geq 0$ $\frac{-x-8}{x+4} \geq 0$  <p style="text-align: center;"><math>[-8, -4)</math></p>
Quadratic Inequalities	<ul style="list-style-type: none"> <li>• Set right side to 0</li> <li>• Factor the left side</li> <li>• Set each factor to 0 and solve using general rules</li> <li>• If it is also rational (fraction), then incorporate those rules</li> <li>• Graph using test points</li> </ul>	$x^2 - x > 6$ $x^2 - x - 6 > 0$ $(x-3)(x+2) > 0$ $x-3 > 0$ $x+2 > 0$  <p style="text-align: center;"><math>(-\infty, -2) \cup (3, \infty)</math></p>
