

Mathematics Learning Styles Descriptions and Suggestions

Visual/Verbal Learning Styles

Visual: Learning from shape, color and arrangement	Verbal: Learning from words, whether written or spoken
<ul style="list-style-type: none"> • prefer demonstrations and examples • prefer maps and flow charts • use color and shapes • “see” the process 	<ul style="list-style-type: none"> • prefer written or spoken explanations • prefer directions and lists • use verbal/written notes • “talk” through the process
<i>To be more visual...</i>	<i>To be more verbal...</i>
<ul style="list-style-type: none"> • Work textbook/software examples • Use flow charts and sketches • Learn effective use of colors /shapes • Close your eyes and “see” the solution process 	<ul style="list-style-type: none"> • Write out steps for solving • Follow the words in flow charts • Explain procedures to others • Talk about what you’re doing while you do it.

Comments _____

Active/Reflective Learning Styles

Active: Learning by doing, moving and talking	Reflective: Learning from thinking, watching and imagining
<ul style="list-style-type: none"> • learn by doing • “try it out,” then review/ask • usually work well in groups • discuss, explain, argue 	<ul style="list-style-type: none"> • need to consider outcomes before they act • “think about it,” then try • usually work better alone • listen, watch, see patterns
<i>To be more active...</i>	<i>To be more reflective...</i>
<ul style="list-style-type: none"> • Use software to work a variety of different problems • Work at the board • Work with others in groups • Use things to demonstrate ideas 	<ul style="list-style-type: none"> • Watch videotapes/CD ‘s • Look for examples in the book • Review summaries & notes • Find similarities in processes

Comments _____

Factual/Abstract Learning Styles

Factual: Learning facts, procedures and routines	Abstract: Learning from concepts, processes and patterns
<ul style="list-style-type: none"> • prefer facts and steps • like consistent methods • dislike theory questions • just want to get to the solution 	<ul style="list-style-type: none"> • first need to understand idea • like innovative techniques and “tricks” • dislike repeated drillwork • like to solve like a puzzle
<i>To be more factual...</i>	<i>To be more abstract...</i>
<ul style="list-style-type: none"> • practice examples in the book • follow software examples • stick to one solution method • focus on steps for memorizing 	<ul style="list-style-type: none"> • learn the underlying concepts • use software game problems • try different techniques • treat problems like puzzles

Comments _____

Sequential/Global Learning Styles

Sequential: Learning in structured, logical steps	Global: Learning in overall, “big picture,” and/or sudden leaps
<ul style="list-style-type: none"> • like structured learning • learn in logical steps • like to take each step • focus where they are • usually can provide explanations 	<ul style="list-style-type: none"> • like experiential learning • learn in ‘aha’ moments • ‘leap’ through steps • focus ahead of where they are • can demonstrate, but may not be able to explain
<i>To be more sequential...</i>	<i>To be more global...</i>
<ul style="list-style-type: none"> • select instructors who are structured • write down the steps • stay focused on current step • think of how to explain the process to others 	<ul style="list-style-type: none"> • select instructors who relate mathematics to daily life • know that it will ‘click’ • think a few steps ahead • work from both ends of the problem

Comments _____

Visual/Verbal Memory Styles

Visual: Remember shape, color and arrangement	Verbal: Remember words, whether written or spoken
<ul style="list-style-type: none"> • remember what they saw • remember colors and shapes • things are right if they look right • “see” when they remember 	<ul style="list-style-type: none"> • remember what was said • use logic and verbal cueing • things “sound” right • talk to themselves when remembering
<i>To remember more visually...</i>	<i>To remember more verbally...</i>
<ul style="list-style-type: none"> • close your eyes to practice “seeing” solution processes • pay close attention to color and shapes • write whatever you “saw” and then try to fill in missing parts. 	<ul style="list-style-type: none"> • talk about what you’re doing while you solve problems • focus on and repeat the words in flow charts or steps • explain procedures to others • write what you remember and then talk to yourself about the rest

Comments _____

Accepting/Anxious Attitude

Anxious: Attitude about math that is anxious about difficulties	<i>To be less anxious about math...</i>
<ul style="list-style-type: none"> • have strong emotional reactions • become quickly frustrated • may have a “wall” to learning • “blank out” during tests • don’t recognize math successes • likely procrastinate about math 	<ul style="list-style-type: none"> • slow your breathing while working on problems • turn off the negative comments about math or self • use relaxation techniques with practice tests • celebrate math successes
